# Assignment 2

Specification & Grading Guidelines

# Assignment 2 Choices

- Choice of technologies:
  - A New CSS Framework

or

Play Framework

- Choice of Domain:
  - Your Project 1 Content

or

Spacebook

### Assignment 2 Specification

- Choice 1: Select a CSS Framework (not Semantic) and re-implement your Assignment 1 content.
  - Note: You will need to innovate over your assignment 1 content in order to do well. In particular - Media content (images, video, audio).
- Choice 2: Work though the Spacebook 'Stories' (to follow).
- Grading Restriction: There will be a significant bonus for tackling the Play project

# Deadline

• 8th January, 11:00 pm

- Lab11 introduced a 'data.yml' file in the conf directory containing initial user data loaded at startup
- Extend this data to include the full homer clan (and friends). Note, the number of spaces (4) before each field is significant.

User(homer):

firstName: Homer

lastName: Simpson

email: homer@simpson.com

password: secret

User(marge):

firstName: marge

lastName: Simpson

email: marge@simpson.com

password: secret

- Extend the User Model to include the following new fields:
  - Age
  - Nationality
- These fields must be filled in when a user registers.

#### Story 3

- For the new fields accepted in Story 2, display them on the users Home Profile page.
- In addition, on the users 'Public' profile (then one a friend can see), display just the 'Nationality' field

- Provide a way for a user, once logged in, to change some of their profile information. You could take two approaches to this:
  - Provide some extra fields on the home profile which could all be changed when the 'changeText' button is pressed.
  - Provide a link on the home profile say 'edit details' which takes you to a new page where you can edit the details.

- The Members page now shows a list of all members including the currently logged in member. This clearly makes no sense and we should try to remove the current member from the list.
- HINT: This is the Members controller index method:

```
public static void index()
{
  List<User> users = User.findAll();
  render(users);
}
```

 The challenge is to remove the current user from the users list before we send it to the view. Objects can be deleted from a list using the remove method:

```
user.remove(someUser);
```

• In the members page - show each users name + their current status message.

#### Story 7

• If a user attempts to use a url (say <a href="http://localhost:9000/home">http://localhost:9000/home</a>) without being logged in, then the app immediately display the start screen..

 Turn the list of messages on the home page into a table - with two columns. One column for the message text, one for the senders name

#### Story 9

• In the messages table on the home page (story 8), make the senders name into a link to the senders profile. In this way users can easily navigate from a message directly to the sender, and perhaps leave a message.

#### Story 10

Change the Message structure such that it will have a 'Subject' field.
 Make appropriate changes in the UI to support this new field
